

Draft Paper for Discussion: Early Nutrition and Development of Disease in Later Life

Agenda Item: 2

Draft report “*The influence of maternal, fetal and child nutrition on the development of disease in later life*” is being circulated for discussion and comment. This is work in progress and members are requested to provide detailed comments. Issues to consider include:

- Scope of the report - The report currently focuses on impact of early nutrition and growth on the development of cardio-vascular disease. Should the report also include other aspects of health such as:
 - Bone health
 - Dental health
 - Cancers
 - Psycho-social outcomes.
- Is there a right balance in the draft report between the presentation and discussion of animal and human studies?
- Are there any other aspects that need to be covered?

The report is not publicly available due to its draft nature.
